

We help reduce care gaps for patients with asthma with the help of a simple blood test

You have the power to improve the lives of patients with asthma

We can help. At Thermo Fisher Scientific, we're as serious about asthma as you are.

We are the maker of ImmunoCAP™ Specific IgE blood testing, a simple blood test that is an aid in the diagnosis of IgE mediated allergic disorders.<sup>1</sup>

Costs of uncontrolled patients with asthma (\$5,963/year) are double that of controlled patients.<sup>2</sup> There is a need to identify asthma triggers.

up to **90%** of children with asthma have allergic sensitizations<sup>3</sup>

up to **60%** of adults with asthma have allergic sensitizations<sup>4</sup>

Using specific IgE testing can help create simple evidence-based asthma care improvements designed to:

- Increase patient engagement and medication adherence
- Meet quality improvement goals
- Decrease costs associated with “no shows”, acute care utilization, and inappropriate referrals
