Identify antiphospholipid syndrome (APS) with EliA APS tests

Testing for APS associated antibodies according to classification criteria[1]

- Determination of anti-cardiolipin IgG and IgM antibodies
- Determination of anti-β2-glycoprotein I IgG and IgM antibodies
- Use of consensus cut-off for anti-cardiolipin antibodies

High clinical relevance of EliA Cardiolipin IgG/M and EliA β2-Glycoprotein I IgG/M test

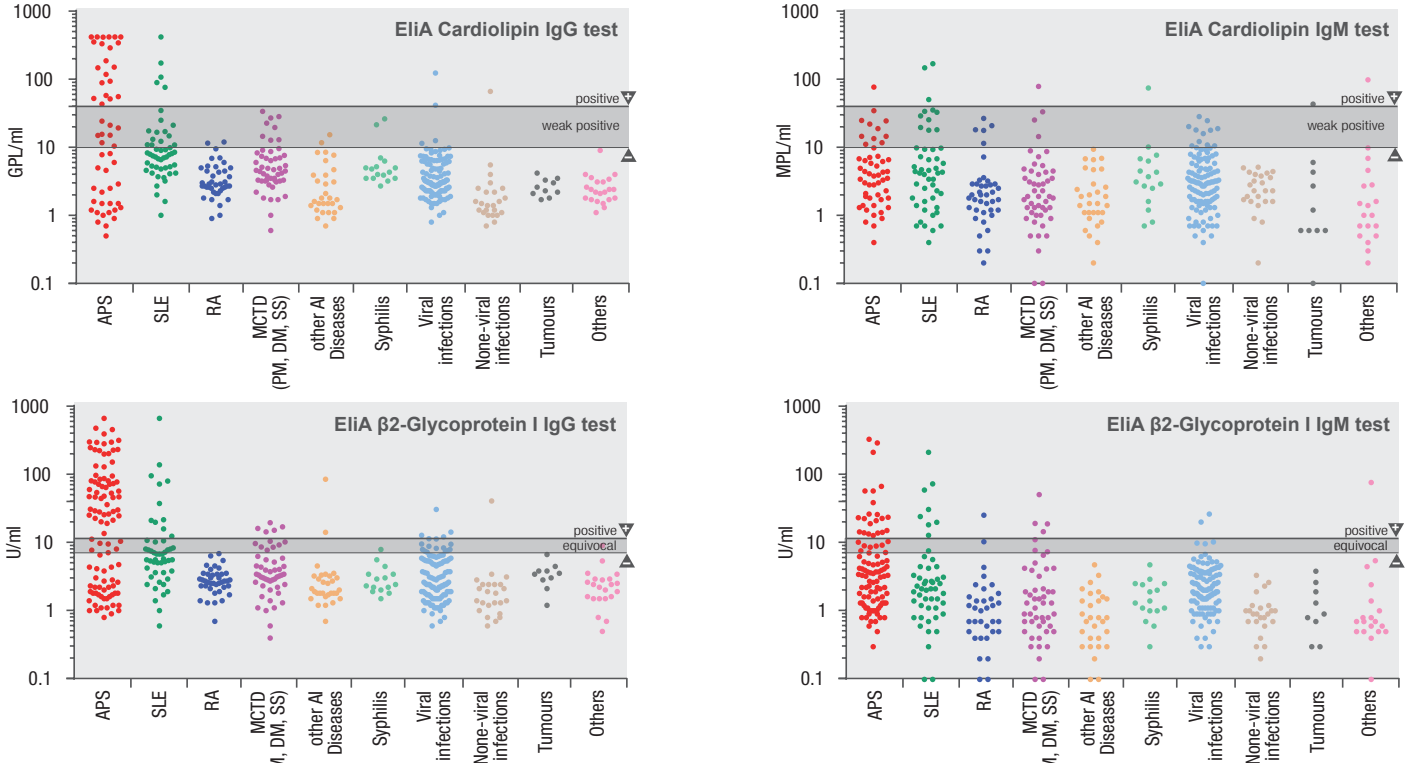

Fig.1: EliA Cardiolipin IgG/M and EliA β2-Glycoprotein I IgG/M test in various clinical cohorts (internal study)

The fully automated EliA™ APS tests provide objective and reliable diagnostic guidance. Their reasonable sensitivity and excellent specificity for EliA APS tests assure high clinical values in different clinical settings[2]. In addition, EliA APS tests can be run on all Phadia™ Laboratory Systems which maximize the flexibility and offer tailor-made solutions for various sizes of laboratories.

	EliA™ Cardiolipin IgG test	EliA™ Cardiolipin IgM test	EliA™ Cardiolipin IgA test	EliA™ β2-Glycoprotein I IgG test	EliA™ β2-Glycoprotein I IgM test	EliA™ β2-Glycoprotein I IgA test
Sensitivity (%)	43	30	7	59	24	44
Specificity (%)	99	92	99	96	96	96.5

Table 1: Clinical performance of EliA Cardiolipin IgA, IgM and IgA test and EliA β2-Glycoprotein I IgG, IgM and IgA test.

EliA APS tests: Improved lab analysis and diagnostics

Test completely automated and efficient

Serum or plasma samples are processed automatically by Phadia Laboratory Systems by reducing the workload for your lab personnel. Operational costs are minimized and planning simplified– leading to an optimized workflow!

Your advantages with EliA Cardiolipin IgA, IgM and IgA test and EliA β2-Glycoprotein I IgG, IgM and IgA test:*

- Excellent performance supporting the diagnosis of APS
- High level of standardization
- Completely automated and efficient testing
- Reducing workload for your lab personnel

* Isolated elevation of IgA anti-cardiolipin and anti-β2-GPI antibodies can occur in APS patients[3]. The more markers / isotypes are found positive, the higher the probability for APS[1]. Internal study shows that the test sensitivity and specificity of EliA Cardiolipin IgA test are 21% and 98.5%, for EliA β2-Glycoprotein I IgA test are 44% and 96.5%, respectively.

EliA Cardiolipin IgA, IgM and IgA test and EliA β2-Glycoprotein I IgG, IgM and IgA test assist you to improve service quality: fully automated testing for specific markers for antiphospholipid syndrome.

Technical data

	EliA Cardiolipin IgG test	EliA Cardiolipin IgM test	EliA Cardiolipin IgA test	EliA β2-Glycoprotein I IgG test	EliA β2-Glycoprotein I IgM test	EliA β2-Glycoprotein I IgA test
Antigen	bovine Cardiolipin, with bovine β2-GPI	bovine Cardiolipin, with bovine β2-GPI	bovine Cardiolipin, with bovine β2-GPI	purified human β2-GPI	purified human β2-GPI	purified human β2-GPI
Kit Size	4 x 12	4 x 12	2 x 12	4 x 12	4 x 12	2 x 12
Unit	GPL-U/ml	MPL-U/ml	APL-U/ml	U/ml	U/ml	U/ml
Negative	< 10	< 10	< 14	< 7	< 7	< 7
